U.S. Patent and Trademark Office PTOL-303 (Rev. 7-05) TECHNOLOGY CENTER 2100

Continuation of 11. does NOT place the application in condition for allowance because: Applicants request Examiner to provide citation in Kato (prior art of record), "...where a signal is transmitted to the header of the packet..." The Examiner would like to point out that Kato teaches (Figure 4 data memory 22 and col. 9, lines 30-36, for example) the request for retransmission is sent to the data memory 22 at the sending side for quick retransmission of the data packet that was uncorrectable at the receiving side. The data memory 22 stores the transmitted packets in appropriate addresses of the memory, which is analogous to the pointer region of the present application. The actual request that is sent to the data memory 22 for retransmission includes the proper header/control information so that the appropriate packet can be retransmitted. It is the Examiner's conclusion that the claims, as presented, are not patentably distinct from the prior art of record.
